SWAROVSKI

SWAROVSKI ARCHITECTURAL SOLUTIONS

(SAS) helps to shape clients' ideas by offering breakthrough concepts, applications, and products. With its expert team of architects, interior designers, and product designers, SAS draws upon diverse experience and develops innovative architectural solutions that maximize the expressive, emotional, and transformative power of crystal.

HONEYCOMB

Honeycomb, an innovative product from the Swarovski Architectural Elements range, is backlit by LEDs, light and crystal combined in completely new ways. 16,000 SWAROVSKI ELEMENTS per square meter, changing color moods, and soft light imparts a magical, almost celestial atmosphere.

CRYSTAL ART PIECE

Presenting sparkling crystal of various shapes and colors, Crystal Art Piece engages its surrounding environment and creates unrivalled space-centering effects. Each decorative lighting element is individually designed and adapted to amaze and inspire atmospheres of architectural proportions. Each crystal art piece is the artful creation of its visionary.

CRYSTAL UNVEIL

In this tantalizing design, light evades shadows as LED technology draws mesmerizing effects from brilliant crystals, and is juxtaposed by a layer of customized foil formations behind glass. Crystal Unveil, with its playful contrasting motifs, create a complex and creative impression, offering an extraordinary spatial experience.

FLYING CANDLE

Flying Candle appears to float freely in the air, as if by magic, and bathe the room in an extraordinary atmosphere of light. Originally proposed by an architect inspired by a motion picture, Flying Candle showcases Swarovski's ability to execute vast design concepts. This subtle design implementation led to the realization of Swarovski's world-first LED Crystal Candle.

RETROFIT CANDLE

Magnificently displayed in the exquisite chandeliers of the Schönbrunn Palace in Vienna, the Palace of Versailles and the Palace of Liechtenstein, Swarovski's Retrofit Candle takes the concept of natural candlelight of bygone eras and modernizes it for today's environment. This breakthrough innovation allows for the replacement of 1,500-hour life light bulbs with 50,000-hour life expectancy of LEDs, creating vivid light output with low energy consumption.

CRYSTAL GROUND

Realms of fantasy open up before the eyes as Crystal Ground alters dimensional perception, making rooms appear wider and more spacious. Skilled hands carefully set each individual crystal precisely into place making it a unique creation as it transforms walls, ceilings, stairs, and facades. Whether kindled by sunlight or lit by artificial means, Crystal Ground will take on a radiance that seems to come from within.
